

UPS

Uninterruptible Power Supply for Commercial & Industrial use

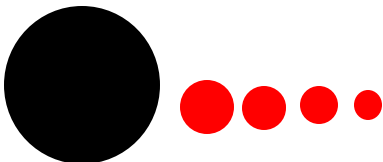

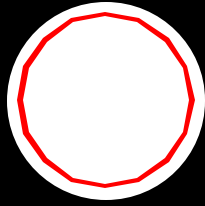

Good business decisions are made based on time and money. Do you have time that it may take to rebuild years of information for a database? Can you afford to spend money on a new computer system?

Dawson Public Power District employees work hard to ensure that the power delivered to your business is high quality, however there are many unforeseen dangers that cannot be controlled. Lightning, auto accidents, animals on powerlines and winter storms cannot be prevented but they do pose a serious threat to your sensitive electronics. An Uninterruptible Power Supply (UPS) can offer protection against these types of damage.

An UPS is more than a surge suppressor. It guarantees the quality of the power delivered to your sensitive electronics. Surges, sags, blackouts, brownouts or spikes are handled by the UPS and protect your computer systems from the problems they cause. It will allow you to work through minor disruptions and safely power down systems before they can be affected by brownouts or blackouts.

Dawson Public Power District can provide personalized service for your business, designing a custom UPS to suit your specific needs. See the reverse side for options or call 308/324-2386 or 800/752-8305 for more information. You can also contact us by e-mailing our Energy Specialist, Bernie Svoboda: bsvoboda@dawsonpower.com

UPS can protect against...

Outages (Blackouts) -- Outages can cause unexpected and potentially damaging shutdown of all electrical equipment.

Sags & Brownouts -- Commonly occur when motors are started or by other faults. Sags and brownouts can cause malfunctions or sudden shutdowns in computer or process control equipment

Surges & Overvoltages -- Electrical equipment can sustain serious damage from surges and overvoltages. These are commonly caused by large electrical load changes.

Transients (Spikes) -- Lightning strikes or the switching of large loads can cause transients or spikes. Without protection, they can destroy electronic circuitry and corrupt stored data.

Warranties

- Standard two-year limited warranty against factory workmanship defects.
- “Double Lifetime” limited warranty provides factory-repair of products due to damage from lightening strikes at no charge, and pays up to \$25,000 for damage to connected equipment resulting from a spike or surge. (Excludes Unity/1 Three-Phase UPS)
- Wide range of service and additional warranty plans to compliment the standard warranty
- 24-hour help desk available.

Let us customize an uninterrupted power supply for your business.
